## **Quick Install**

## **MX-Output-Box**

Security-Vision-Systems MOBOTIX

**Weatherproof Signal Outputs** for MOBOTIX Devices

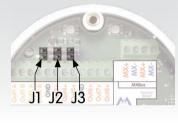

Event-controlled switching of external devices/ systems by MOBOTIX cameras via MxBus; can switch 110/230 V devices using suitable relays

32.199 EN V1 03/2015

- 2 isolated relay outputs, can be reconfigured as additional powered outputs 12 V using jumpers
- Signal output lines up to 50 m/55 yd

#### **Connection of Peripheral Devices (Examples) Terminal Connectors** Outl A Isolated relay outputs Output 1 Out1 B Out2 A Output 2 Out2 B **GND** Ground (GND) outputs Out3+ Output 3 Powered of 12 \ Out4+ Output 4 Out5+ Output 5 **GND** Ground (GND) Powered outputs 12 V Max. 50 m/55 vd Out6+ 50 m/55 Output 6 Out7+ Output 7 Relay for Max. Output 8 110/230 V device (e.g., Eltako ER12-002-UC Lights **Shutters**

| J2     | <b>Out2</b> isolated (for relay)            | Out2 powered output (max. 50 mA/12 V) |  |  |
| J3     | Do not use – reserved for future extensions |                                       |  |  |

Alarm system

If you would like to use more than eight signal outputs, you can attach more than one MX-Output-Box module (max. of seven MxBus modules on one MxBus).

Note

**MOBOTIX D15Di DualDome** 

MX-D15Di-Sec-D22D22

# **Installation Instructions**

#### 1. Attach the box Attach the MX-Output-Box at the mounting position

One MxBus must not be

connected to more than

one camera!

with the cable ports pointing downwards (torque 0.4 Nm). Next, remove the box cover (three screws).

### 2. Establish connection to the camera Before proceeding, make sure there is no cur-

- rent on the MxBus wires! • Cut the MxBus cable to size (2-wire, 0.6 to 0.8 mm
- diameter). When using wires without jacket, strip the insulation of the wires for 5 mm and push the wires through the eight-wire plug (center). • When using a cable with jacket, remove the
- pre-installed eight-wire plug and insert the appropriate cable plug (3 to 5 mm or 5 to 7 mm). Press the rubber plug into the casing in such a way that the rims stick out equally on both sides. Push the cable through the plug, remove the sheath on a length of 15 mm and strip the insulation of the wires for about 5 mm. • Connect the MxBus wires to the terminals of the
- MX-Output-Box using the screwdriver. Make sure to maintain the polarity (see sticker in front of the terminal). · Connect the MxBus wires as described in the corresponding manual to the MOBOTIX camera
- or to another MxBus module connected to a  $camera\,(e.g.\,KeypadRFID,\,MX-DoorMaster).\,Make$ sure not to exceed the overall length of the MxBus wiring (max. 50 m/55 yd).

### 3. Connect the peripheral devices

Connect the other wires/cables as required and by using the corresponding cable plugs (outputs, MxBus).

4. Tie down the cables Insert one or two cable ties depending on the attached

cables as shown. Pull the cable ties tightly around the cables in order to provide strain relief.

MxBus plug in MOBOTIX

D15Di

#### Mount the cover back onto the MX-Output-Box and tighten it using the cover screws (torque 0.4 Nm).

5. Mount the cover

### **LED Signaling**

|  | LED                   |     | Meaning   |
|--|-----------------------|-----|---|
|  | Operation<br>(left)   | 0   | Not connected   |
|  |                       |     | Regular operation   |
|  |                       |     | Unencrypted communication   |
|  |                       |     | Error during communication  |
|  | I/O Status<br>(right) |     | As long as one of the signal outputs is closed:                                       |
|  |                       | 0/0 | Shows status of all 8 outputs one after the other, then pauses for 4 seconds.         |
|  |                       |     | On closed signal outputs, the<br>LED flashes green once, on<br>open inputs blue once. |
|  |                       |     |   |

**MX-Output-Box** 

### **Initial Operation of the MX-Output-Box**

### 1. Open the MOBOTIX camera's user interface in the browser

- Enter the IP address of the camera that is connected to the MX-Output-Box in the browser (admin access rights required):
  - http://<IP address of camera>

#### 2. Make sure the camera uses PoE class 3 Open the **Admin Menu > Ethernet Interface** dialog.

- If Power Supply has not been set to Power over
- Ethernet (Class 3), click on the Change link, follow the steps of the wizard and activate the new class.

#### 3. Activate the MX-Output-Box Open the Admin Menu > Manage Hardware

green, click on Connect.

- **Expansions** dialog. If the LED icon in the line MxBus Interface is not
- In the Admin Menu > Manage MxBus Modules dialog, Devices section, MX-Output-Box line, click on the Activate button.
- If the **Update SW** button appears, click on it to update the software of all connected modules. Click on the MxMessageSystem Configuration
- button in the same dialog. Click on Load connected devices from configuration.
- Click on Edit Messages, then on New message and enter a suitable name (e.g., "Switch\_lights"). Next, click on Save messages.
- Click on the MX-Output-Box bar, then on Add timer and enter the number of seconds for the timer to run. Next, click on Save timers.
- Find the output you want to configure and select the Switch\_lights message and Timer1.

- In the MX-Output-Box section at the bottom, click on Write configuration. Click on Set, then on Close at the bottom of the
- dialog.

### 4. Configure actions

- Open the Admin Menu > Message Profiles for Action Groups dialog and click on the Add new profile button. • Enter the same name in the MxMessageSystem
  - Name field you entered in step 3 above as Message name, i.e., "Switch\_lights". It is recommended to use a similar name as profile name (e.g., "SwitchLights-Profile"). Click on Set, then on Close. In the Setup Menu > Action Group Overview
- dialog, click on **Add new group** and enter a name (e.g., "SwitchLights\_AG"). Click on the Edit button in this line. • In the Event Selection section, select the events
- that will switch the lights (e.g., Signal: UC). Click on the **Add new action** button at the bottom of the dialog and select MxMessageSystem: Switch-
- Lights\_Profile as value. Add additional actions as required and close the dialog by clicking on Set and then on Close. additional information MxMessageSystem, see the help page of this

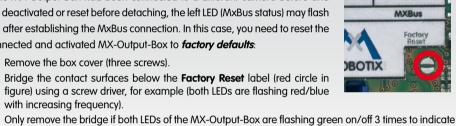

dialog (click on 🕙) or on www.mobotix.com> Support > Media Library > Compact Guides in the document *Technical Note: MxMessageSystem*. 5. Store the camera configuration

### In the Live screen of the camera, click on Admin

Menu > Configuration > Store, permanently store the camera configuration and reboot the camera.

### **Resetting the MX-Output-Box** If the MX-Output-Box had been connected to a different camera before and

not deactivated or reset before detaching, the left LED (MxBus status) may flash red after establishing the MxBus connection. In this case, you need to reset the connected and activated MX-Output-Box to factory defaults: Remove the box cover (three screws). Bridge the contact surfaces below the Factory Reset label (red circle in

- that the process has finished successfully. Mount the cover back onto the box (torque 0.4 Nm).
- Set up the MX-Output-Box in the camera (see «Initial Operation of the MX-Output-Box»).

with increasing frequency).

to the dangers of explosion.

#### This product must not be used in locations exposed For MOBOTIX cameras with MxBus connector and software version MX-V4.1.4.11 or higher.

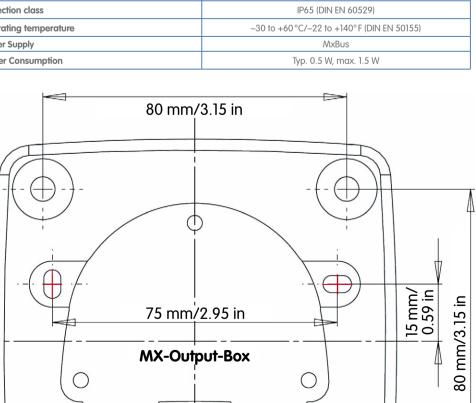

**Safety Warnings** 

- Make sure to install this product as shown in the installation instructions above. Electrical systems and equipment may only be
- installed, modified and maintained by a qualified electrician or under the direction and supervision
- of a qualified electrician in accordance with the applicable electrical guidelines. Make sure to properly set up all electrical connections. The MOBOTIX MX-Output-Box is to be used only for providing signal outputs for MOBOTIX cameras in IP65 environments.
- Make sure that you adhere to all relevant laws, regulations and that you fulfill all certification requirements for the intended use.
- Technical Specifications: Interface to camera Powered outputs 12 V
- Torque for all screws: 0.4 Nm. Press the white cable plug (eight-wire plug or
- cable plug 3 to 5 mm or 5 to 7 mm) into the cas-
- ing in such a way that the rims stick out equally on both sides The length of the entire MxBus wiring must not exceed 50 m/55 yd.
- The length of each signal output line must not exceed 50 m/55 yd.
- Diameter of all wires: 0.6 to 0.8 mm (0.8 mm = AWG 21 recommended to reduce line losses). The jumper will be used for future versions of the

MX-Output-Box and must not be used at present.

MxBus
